

Allmedic Product Information

Active Face & Body Cleanser 200ml

Features	Benefits
12% + Glycolic Acid Natural chemical exfoliator	Water soluble Alphahydroxy Acid (AHA). Targets dead or damaged skin by breaking the bonds between the surface skin cells resulting in chemical exfoliation. This increases the shedding of dead old skin cells allowing newer and healthier keratinocytes/ skin cells to surface. Younger cells at the surface make the skin appear healthier and more youthful. Helps rough, dry, scaly skin become smooth and hydrated in a short period of time. Studies have shown that AHA's with Salicylic acid can aid in stimulating collagen production, resulting in firmer skin.
2% + Salicylic Acid Natural chemical exfoliator	The BHA salicylic acid is a lipid (oil) soluble molecule. This allows it to penetrate pores that contain sebum and exfoliate the pore lining. Making it useful to use on oily skin and acne prone skin to control breakouts.
Epidermal barrier function of the skin	Maintains skin hydration by reducing trans epidermal water loss. Ongoing use helps enhance the appearance of the skin, making it smoother, improving uneven skin tone and diminishing the appearance of fine wrinkles.
Non Soap, gentle foaming.	Non-drying, suitable for all skin types.
